

SkyStream

support over the **horizon**

support over the **horizon**

Sky-Stream provides cost-effective communication solutions to meet the needs of all luxury yacht owners and operators. Our always-on, high speed communication links support complete office applications including mail, voice, TV and data.

Flexible VSAT networks meet the needs of the occasional user or those who require it at all times. They are purposely designed for marine use, are fully encrypted and are easily integrated with existing onboard systems. Sky-Stream keeps you connected out on the ocean even in the worst conditions, with coverage extending across the Indian Ocean, the Arabian Gulf, the Red Sea and the Mediterranean.

True mobility can be achieved with Sky-Stream, global NMS, automatic beam switchover and advanced features that ensure seamless connectivity as yachts travel among multiple networks.

Global NMS (Global Network Management System)

To achieve consistent coverage globally, yachts need to move between satellite networks on various transponders and satellites, controlled from a variety of hubs and network management systems around the world. Sky-Stream's Global Network Management System (Global NMS) enables our hubs to monitor and manage each travelling remote - uniquely identified by a fixed global IP address - ensuring a consistent connection as it passes through networks around the world.

Automatic Beam Selection (ABS)

Automatic Beam Selection (ABS) is the most powerful and flexible way for yachts to roam automatically from satellite network to network and maintain seamless connectivity without the need for manual intervention. Through exact GPS positioning and constant data point comparison, the Sky-Stream iDirect router determines the best satellite coverage at any time and initiates an automatic re-pointing of the antenna, and transfer of connectivity, when necessary.

packages

Fleet equipment. With our Maritime VSAT solutions you can count on precise, reliable downlinks and uplinks - regardless of weather or movement. Our stabilized, auto-pointing solutions provide you with voice and data connectivity for your yachts. Antenna size choices according to the type of service, routes and the size of Yacht.

Applications

GSM

Through the deployment of state-of-the-art technologies, Sky-Stream can extend the range of any local GSM network to any location. This enables the use of any kind of smart phone including iPhone and BlackBerry*, and eliminates the need to pay expensive satellite or GSM roaming calls.

* conditional on local operator providing relevant packages

TV on Demand

Sky-Stream's recreational IP-TV service provides customers operating in remote locations - on and off-shore - with on-demand, high-quality streaming for movies, news and sports shows.

VoIP

Voice over Internet Protocol (VoIP) telephony services provide high quality and cost effective communication which allows users to make telephone calls over the internet from very remote, isolated locations, to anywhere in the world.

Sky-Stream operations throughout the region are controlled at our state-of-the-art 24/7 Networks Operations Center (NOC) based in Dubai Internet City. This centre is fully supported at all times by a highly experienced team of professionally certified RF and IT engineers. They ensure we deliver communications with consistent quality of service, proven reliability and superior customer service.

**World-class support
across the region**

SAT foot print

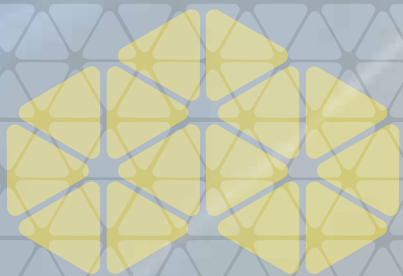

Headquartered in Dubai, with local offices in Afghanistan and Iraq, Sky-Stream is a leading provider of secure satellite communication solutions across the Middle-East. With customers primarily based in the marine, military and oil & gas sectors, our reputation is built on keeping them connected in some of the most isolated locations in the region via our secure VSAT networks.

Sky-Stream is part of the Atlas Telecom Group of companies based in Dubai. Established in 2004 Sky-Stream quickly forged a reputation as a reliable provider of satellite internet access and quality low-cost VOIP services.

Today Sky-Stream is established as a leading provider of managed and turnkey VSAT solutions across the Middle East, North Africa and South-West Asia for customers engaged in the marine, military, and oil and gas sectors.

Sky-Stream provides flexible solutions to meet the ever-changing demands of its customers, including the design, build and operation of networks. Its state-of-the-art control centre and hubs are complemented by a highly qualified and experienced team of engineers, project managers and customer service personnel.
